Module 01 – Extra Class

LIST

Nguyen Quoc Thai

AI VIET NAM
@aivietnam.edu.vn

Objectives

Python Basic

- Variable
- Operators
- Condition
- Function
- Built-in Function
- For/While Loop
- If-else

Data Structure

- List

Review

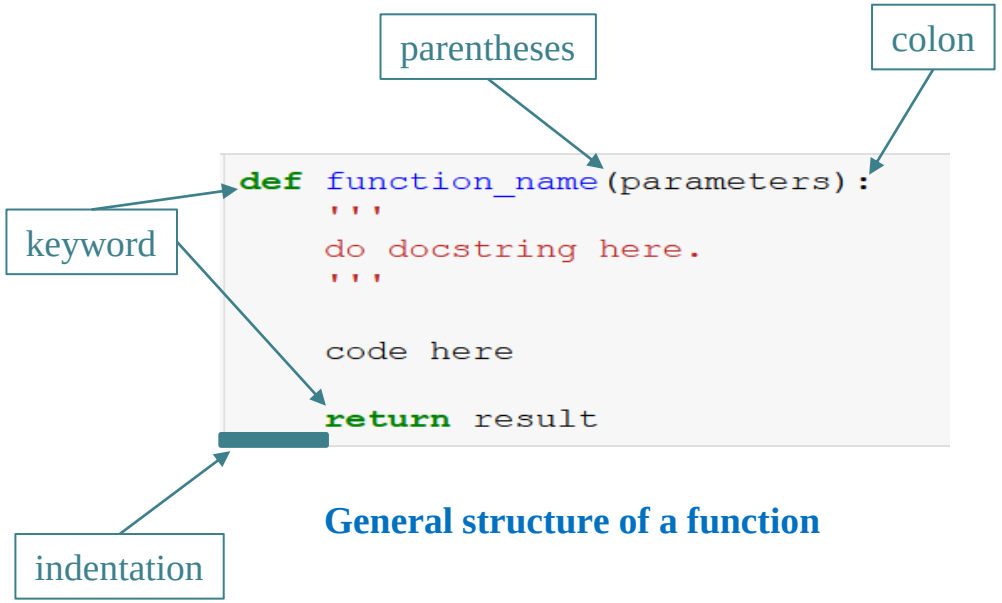
Function

Built-in Functions

print(parameters**)**

type(parameter**)**

User-defined Functions



General structure of a function

Review

If-Else

colon

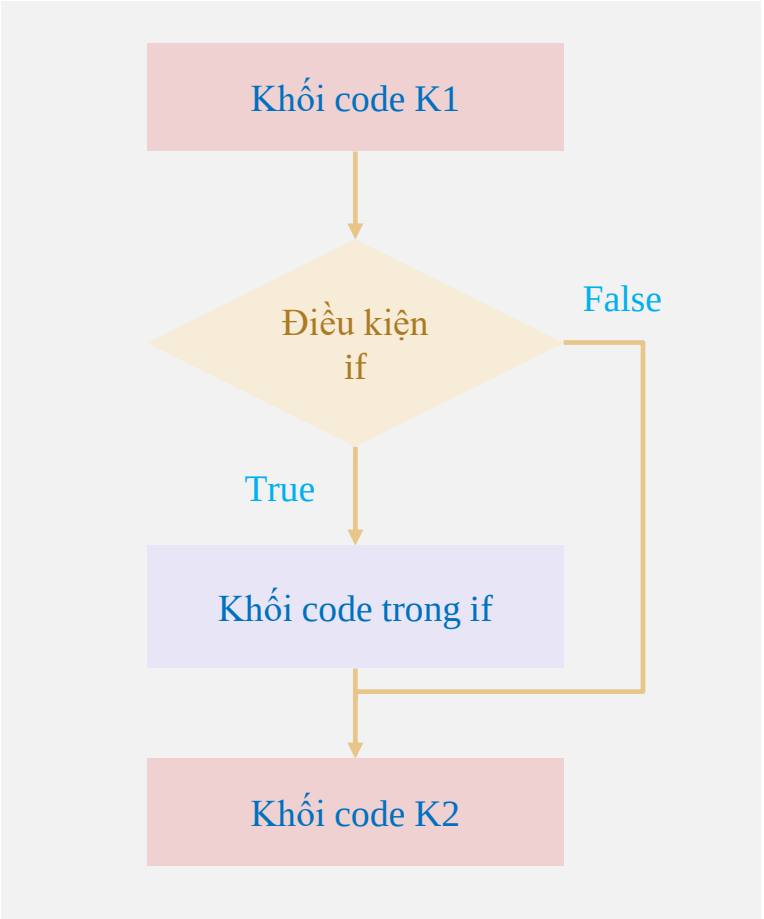
keyword

```
# khối code trước if (K1)

if condition:
    # khối code trong if

# khối code sau if (K2)
```

indentation



Review

Example

Built-in Functions

```
1 sentence = 'I love AI'
2 print(sentence)
3 print(type(sentence))
```

```
I love AI
<class 'str'>
```

User-defined Functions

```
1 def add_numbers(num_1, num_2):
2     total = num_1 + num_2
3     return total
4
5 num_1 = 10
6 num_2 = 8
7 print(add_numbers(num_1, num_2))
```

```
18
```

SECTION 1

Review

SECTION 2

List

SECTION 3

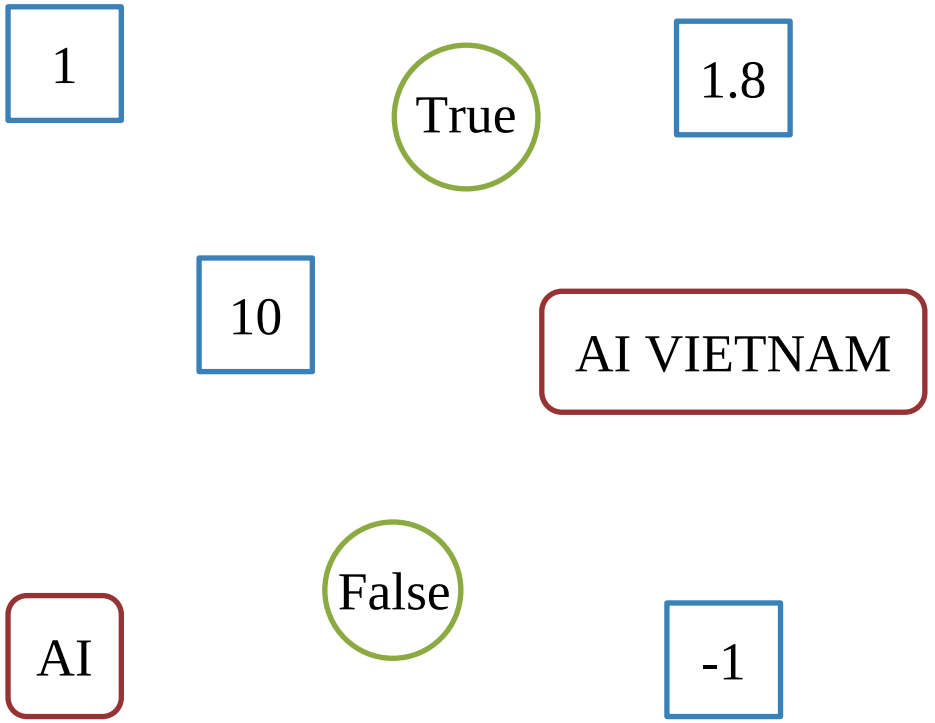
Built-in Functions

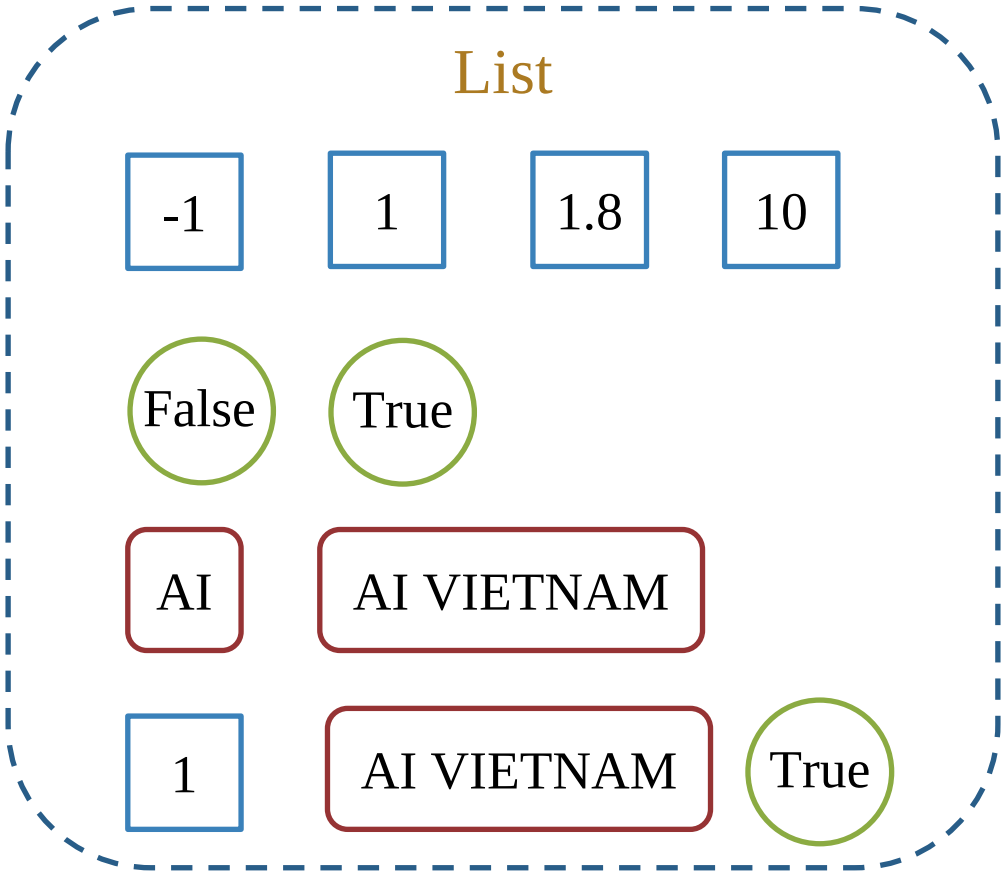
SECTION 4

Practice

List

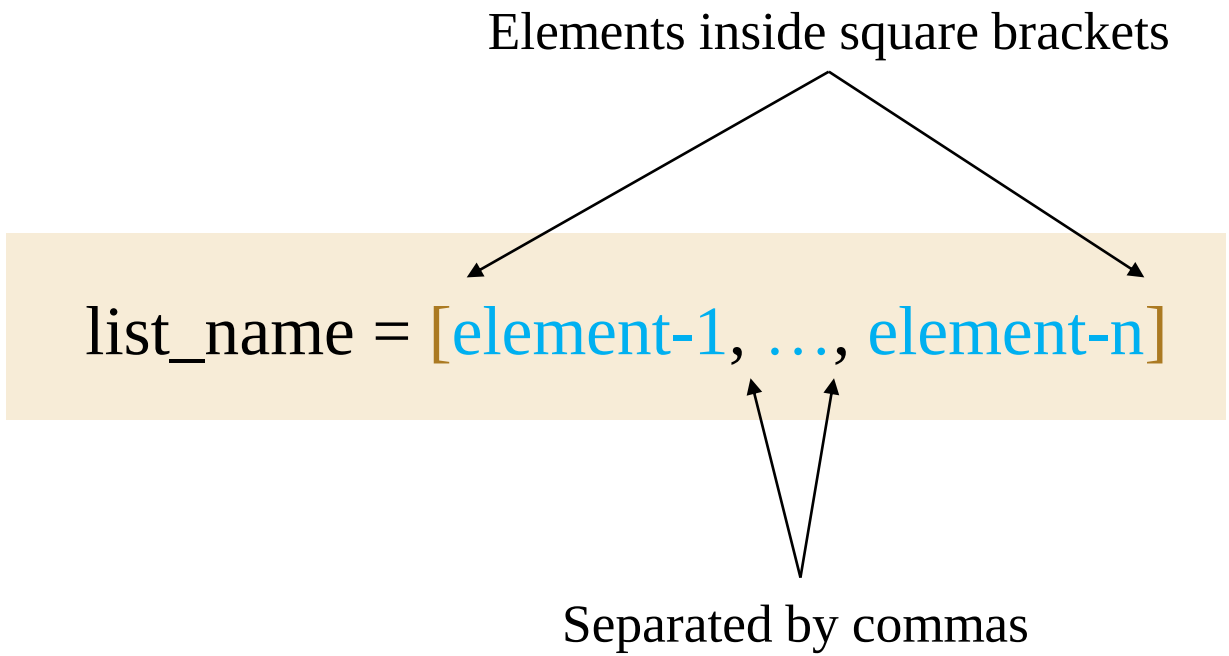
Lists are used to store multiple items in a single variable





List

A container that can contain elements



List

A container that can contain elements

```python
# create a list
data = [4, 5, 6, 7, 8, 9]
print(data)
print(type(data))
print(len(data))
```

```
[4, 5, 6, 7, 8, 9]
<class 'list'>
6
```

```python
# danh sách trống
emty_list = []

# danh sách số tự nhiên nhỏ hơn 10
my_list = [0, 1, 2, 3, 4, 5, 6, 7, 8, 9]

# danh sách kết hợp nhiều kiểu dữ liệu
mixed_list = [True, 5, 'some string', 123.45]
n_list = ["Happy", [2,0,1,5]]

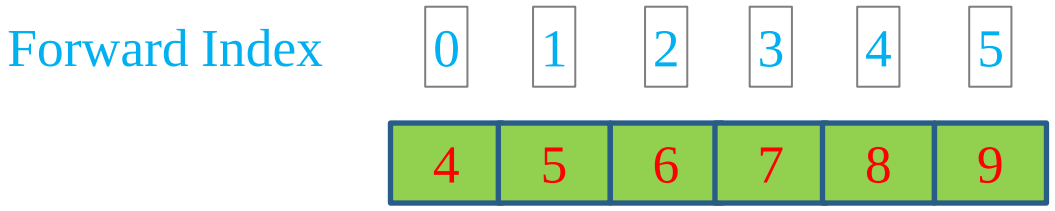
# danh sách các loại hoa quả
shopping_list = ['táo', 'chuối', 'cherries', 'dâu', 'mận']
```

List

Index

- Each element in a list is associated with a number, known as a index

data = [4, 5, 6, 7, 8, 9]



Access elements using index

data[0] **data[3]**

```
1 data = [4, 5, 6, 7, 8, 9]
2 print(data[0])
3 print(data[3])
```

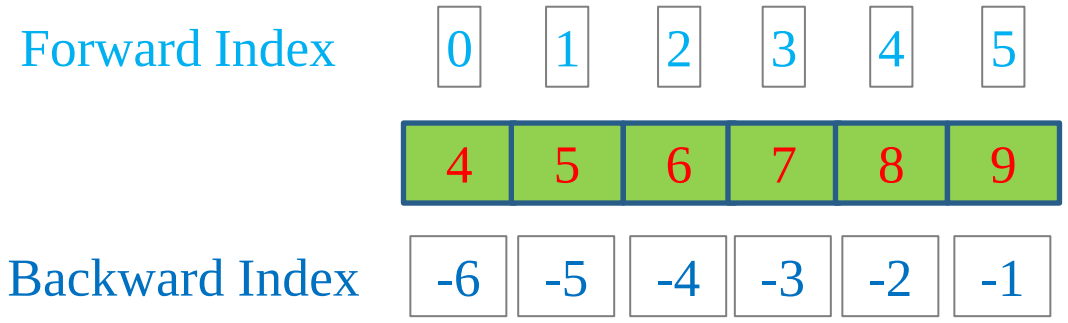
```
4
7
```

List

Index

- Each element in a list is associated with a number, known as a index

data = [4, 5, 6, 7, 8, 9]



Access elements using index

data[0] **data[3]** **data[-1]** **data[-3]**

4 7 9 7

```
1 data = [4, 5, 6, 7, 8, 9]
2 print(data[-1])
3 print(data[-3])
```

```
9
7
```

List

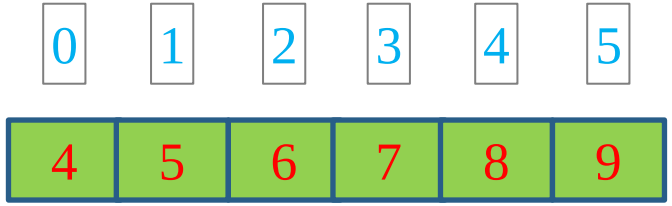
Slicing

- Access a section of items from list using the slicing operator.

```
list[start:end:step]
```

data = [4, 5, 6, 7, 8, 9]

Forward Index



data[:3]

data[2:4]

data[3:]

```
1 data = [4, 5, 6, 7, 8, 9]
2 print(data[:3])
3 print(data[2:4])
4 print(data[3:])
```

```
[4, 5, 6]
[6, 7]
[7, 8, 9]
```

List

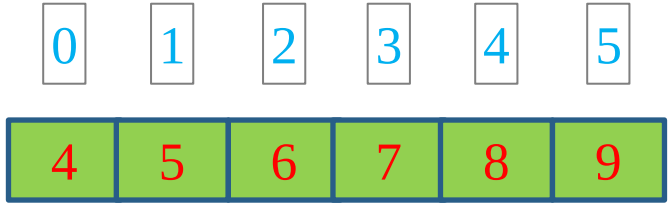
Slicing

- Access a section of items from list using the slicing operator.

```
list[start:end:step]
```

data = [4, 5, 6, 7, 8, 9]

Forward Index



data[::2]

```
1 data = [4, 5, 6, 7, 8, 9]
2 print(data[::2])
```

```
[4, 6, 8]
```

List

Slicing

- Access a section of items from list using the slicing operator.

list[start:end:step]

data = [4, 5, 6, 7, 8, 9]

Forward Index	0	1	2	3	4	5
	4	5	6	7	8	9
Backward Index	-6	-5	-4	-3	-2	-1

data[:-3]

4	5	6

data[-2:-4]

∅

data[1:-3]

5	6

```
1 data = [4, 5, 6, 7, 8, 9]
2 print(data[:-3])
3 print(data[-2:-4])
4 print(data[1:-3])
```

```
[4, 5, 6]
[]
[5, 6]
```

List

Add elements to a Python List

- Use the **append()** method to add an element to the end of a Python list.

data = | 6 | 5 | 7 | 1 | 9 | 2 |

data.append(4) # thêm 4 vào vị trí cuối list

data = | 6 | 5 | 7 | 1 | 9 | 2 | 4 |

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.append(4)
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[6, 5, 7, 1, 9, 2, 4]
```

List

Add elements to a Python List

- Use the **insert()** method to add an element at the specified index of a Python list.

data = | 6 | 5 | 7 | 1 | 9 | 2 |

data.insert(0, 4) # thêm 4 vào vị trị index=0

data = | 4 | 6 | 5 | 7 | 1 | 9 | 2 |

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.insert(0, 4)
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[4, 6, 5, 7, 1, 9, 2]
```

List

Add elements to a Python List

- Use the **extend()** method to add elements to a list from other iterables.

data = | 6 | 5 | 7 | 1 |

data.extend([9, 2]**)** # thêm 9 và 2 vào vị trí cuối list

data = | 6 | 5 | 7 | 1 | 9 | 2 |

```
1 data = [6, 5, 7, 1]
2 print(data)
3 data.extend([9, 2])
4 print(data)
```

```
[6, 5, 7, 1]
[6, 5, 7, 1, 9, 2]
```

List

Updating an element

- Change the items of a list by assigning new values using the = operator .

```
# thay đổi phần tử thứ 1
data[1] = 4
```

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data[1] = 4
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[6, 4, 7, 1, 9, 2]
```

List

Delete an element from a list

- Using the **remove()** and **pop()** method.

data = 

data.pop(2) # tại vị trí index = 2

data = 

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.pop(2)
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[6, 5, 1, 9, 2]
```

data = 

data.remove(5) # xóa phần tử đầu tiên
có giá trị là 5

data = 

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.remove(5)
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[6, 7, 1, 9, 2]
```

List

Delete elements from a list

- Using ‘del’ keyword to delete objects or **clear()** to removal elements.

data = | 6 | 5 | 7 | 1 | 9 | 2 |

```
# xóa phần tử thứ 1 và 2
del data[1:3]
```

data = | 6 | 1 | 9 | 2 |

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 del data[1:3]
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[6, 1, 9, 2]
```

---

data = | 6 | 5 | 7 | 1 | 9 | 2 |

```
data.clear()
```

data = []

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.clear()
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[]
```

List

Index() method: Returns the index of the first matched item

data = | 6 | 5 | 7 | 1 | 9 | 2 |

trả về vị trí của phần tử đầu tiên có giá trị là 9
data.index(9)
=> 4

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data.index(9))
```

```
4
```

Reverse() method: Reverses the item of the list

data = | 6 | 5 | 7 | 1 | 9 | 2 |

data.reserse()

data = | 2 | 9 | 1 | 7 | 5 | 6 |

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.reverse()
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[2, 9, 1, 7, 5, 6]
```

List

Count() method: Returns the count of the specified item in the list

data = | 6 | 5 | 7 | 1 | 9 | 2 |

trả về số lần phần tử 7 xuất hiện trong list
data.count(7) = 1

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data.count(7))
```

```
1
```

Copy() method: Returns the shallow copy of the list

data = | 6 | 5 | 7 | 1 | 9 | 2 |

data_copy = data.copy()

data_copy = | 6 | 5 | 7 | 1 | 9 | 2 |

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data_copy = data.copy()
4 print(data_copy)
```

```
[6, 5, 7, 1, 9, 2]
[6, 5, 7, 1, 9, 2]
```

List

Sort() method: Sorts the list in ascending/descending order

data =

6	5	7	1	9	2

```
data.sort()
```

data =

1	2	5	6	7	9

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.sort()
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[1, 2, 5, 6, 7, 9]
```

data =

6	5	7	1	9	2

```
data.sort(reverse = True)
```

data =

9	7	6	5	2	1

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(data)
3 data.sort(reverse=True)
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
[9, 7, 6, 5, 2, 1]
```

List

+ and * operators

data1 = | 6 | 5 | 7 |

data2 = | 1 | 9 | 2 |

data = data1 + data2 # nối 2 list

data = | 6 | 5 | 7 | 1 | 9 | 2 |

```
1 data1 = [6, 5, 7]
2 data2 = [1, 9, 2]
3 data = data1 + data2
4 print(data)
```

```
[6, 5, 7, 1, 9, 2]
```

---

data = | 6 | 5 |

nhân list với một số nguyên
data_m = data * 3

data_m = | 6 | 5 | 6 | 5 | 6 | 5 |

```
1 data = [6, 5]
2 print(data)
3 data_m = data*3
4 print(data_m)
```

```
[6, 5]
[6, 5, 6, 5, 6, 5]
```

Built-in Functions for List

len(), min(), max()

data = | 6 | 5 | 7 | 1 | 9 | 2 |

trả về số phần tử
len(data) = 6

trả về số phần tử có giá trị nhỏ nhất
min(data) = 1

trả về số phần tử có giá trị lớn nhất
max(data) = 9

```
1 # get a number of elements
2
3 data = [6, 5, 7, 1, 9, 2]
4 length = len(data)
5 print(length)
```

```
6
```

```
1 # get the min and max values
2
3 data = [6, 5, 7, 1, 9, 2]
4 print(min(data))
5 print(max(data))
```

```
1
9
```

Built-in Functions for List

sum(): returns a number, the sum of all elements in a list

sum(iterable, start)

sum(data)
=> 30

```
1 data = [6, 5, 7, 1, 9, 2]
2 print(sum(data))
```

```
30
```

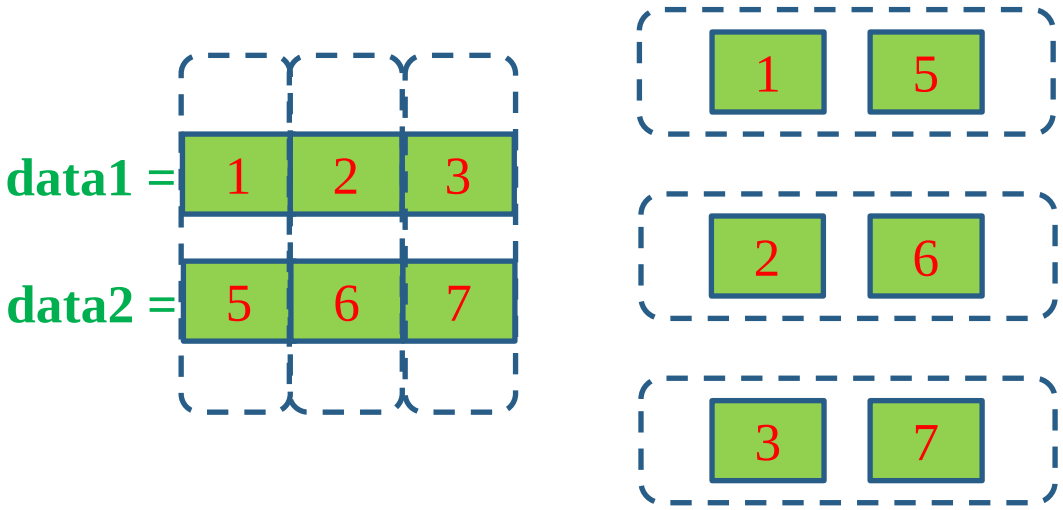
```
1 data = [6, 5, 7, 1, 9, 2]
2 # start: a value that is added to the return value
3 print(sum(data, 7))
```

```
37
```

Built-in Functions for List

zip(): takes iterable containers and returns a single iterator object, having mapped values from all the containers.

```
zip(*iterators)
```



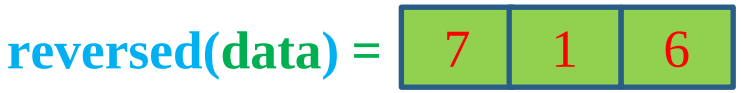
```
1 data1 = [1, 2, 3]
2 data2 = [5, 6, 7]
3
4 for v1, v2 in zip(data1, data2):
5     print(v1, v2)
```

```
1 5
2 6
3 7
```

Built-in Functions for List

reversed(): returns a reversed iterator object

```
reversed(iterable)
```



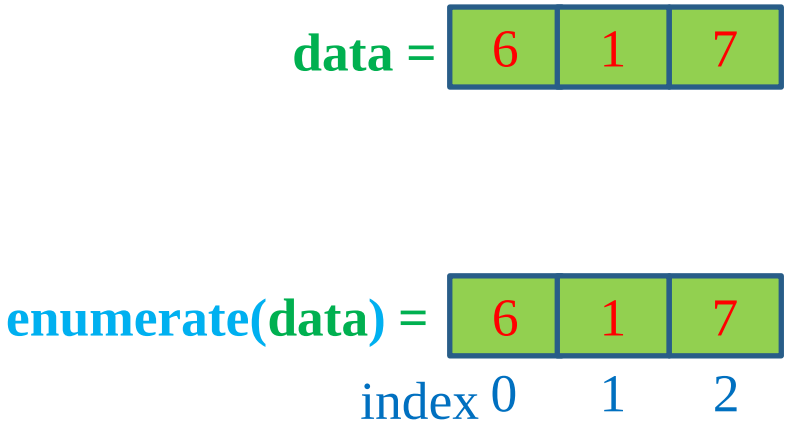
```
1 data = [6, 1, 7]
2 for value in reversed(data):
3     print(value)
```

```
7
1
6
```

Built-in Functions for List

enumerate(): adds a counter to an iterable and returns it as an enumerate object (iterator with index and the value)

reversed(iterable, start)



```
1 data = [6, 1, 7]
2 for index, value in enumerate(data):
3     print(index, value)
```

```
0 6
1 1
2 7
```

```
1 data = [6, 1, 7]
2 for index, value in enumerate(data, 7):
3     print(index, value)
```

```
7 6
8 1
9 7
```

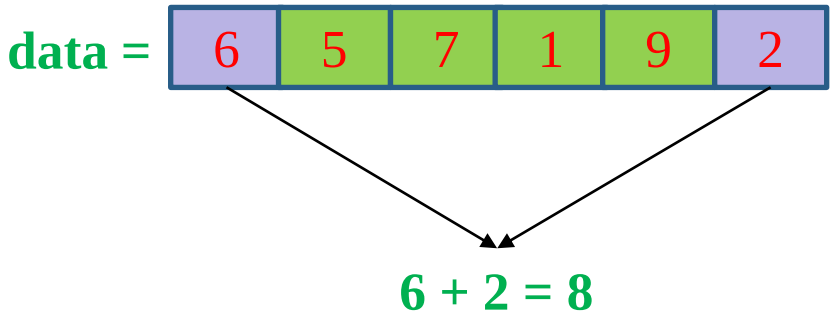
Built-in Functions

SECTION 4

Practice

Practice

Sum of even numbers



Practice

Sum of even numbers

data = | 6 | 5 | 7 | 1 | 9 | 2 |

For loop

```
1 # sum of even numbers
2 def even_sum_1(data):
3     result = 0
4
5     for value in data:
6         if value%2 == 0:
7             result = result + value
8
9     return result
10
11 data = [6, 5, 7, 1, 9, 2]
12 sum_data = even_sum_1(data)
13 print(sum_data)
```

```
8
```

Practice

Sum of even numbers

While loop

```
1 def even_sum_2(data):
2     index = 0
3     result = 0
4 
5     while index < len(data):
6         if data[index]%2 == 0:
7             result = result + data[index]
8         index = index + 1
9 
10    return result
11 
12 data = [6, 5, 7, 1, 9, 2]
13 sum_data = even_sum_2(data)
14 print(sum_data)
```

Practice

Two sum

- Given an array of integers *data* and an integer *target*, return indices of the two numbers such that they add up to *target*

data =

6	5	7	1	9	2

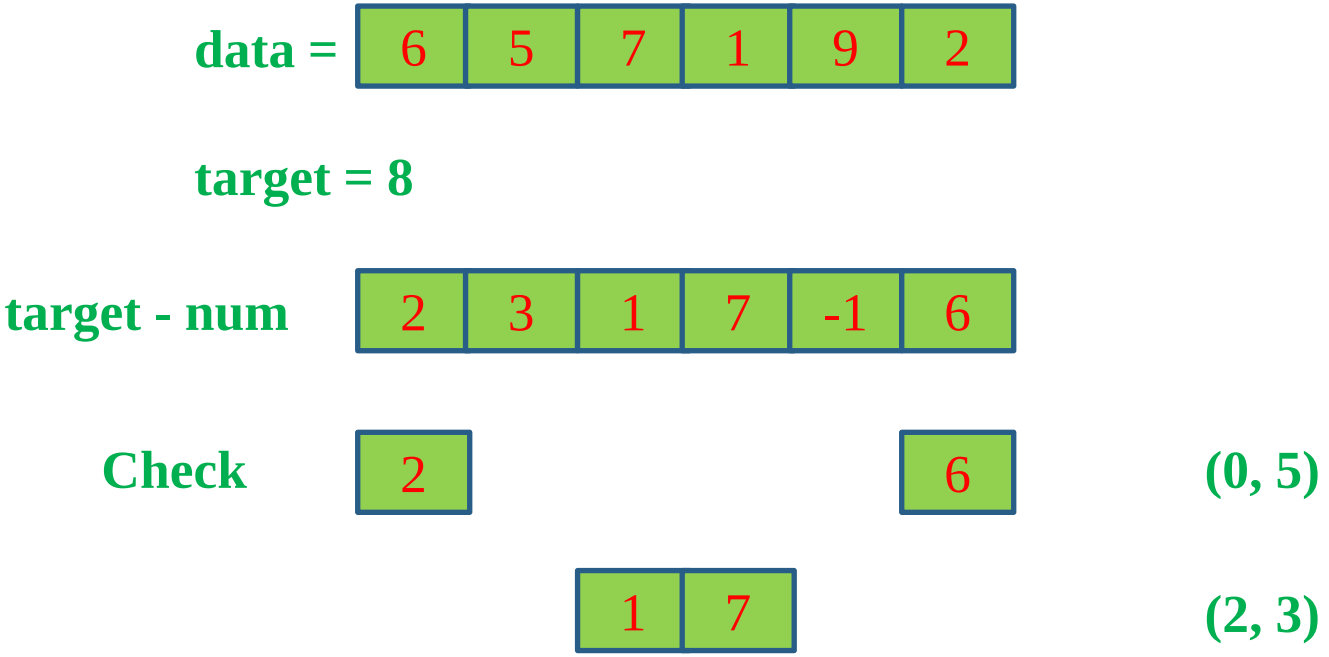
target = 8

=> [2, 3] # [0, 5]

Practice

Two sum

- Given an array of integers *data* and an integer *target*, return indices of the two numbers such that they add up to *target*



Practice

Two sum

```python
def two_sum(data, target):
        num_indices = {}

        for i, num in enumerate(data):
            complement = target - num
            if complement in num_indices:

                return [num_indices[complement], i]

            num_indices[num] = i

        return []

data = [6, 5, 7, 1, 9, 2]
target = 8
result = two_sum(data, target)
print(result)
```

```
[2, 3]
```

Summary

List

- Create: nums = [1, 2, 3]
- Index: nums[0] => 1
- Slicing: nums[:2] => [1, 2]
- Add an element: nums.append(3)
- Update: nums[0] = 2
- Delete: nums.remove(3), nums.pop(0)
- Reverse: nums.reverse()
- Count: nums.count(1)
- Copy: new_nums = nums.copy()
- Sort: nums.sort(reverse=True/False)

Built-in Functions

- len(nums)
- min(nums)
- max(nums)
- sum(nums)
- reversed(nums)
- enumerate
- zip

Thanks!

Any questions?
